ADAS Statement

Modern cars are developing new safety features at an unprecedented pace.

Your safety is of the paramount importance to us and Bolam Crash Repair is investing heavily to remain at the forefront of these developments.

Advanced Driver Assistance Systems (ADAS) are the latest safety critical advancement. If your vehicle is fitted with ADAS, it may need to re-calibrated after a repair – rest assured Bolams have a solution.

Using data from Thatcham* we can identify vehicles that maybe fitted with ADAS technology. If we have repaired an area around ADAS components, and the vehicle manufacturer recommends re-calibration post repair, we will introduce/arrange for you to meet/use our Approved Supplier who will carry out a certified calibration of the ADAS System.

The exact cost of this may not be known at the start of the repair, as the extent of any damage and the repairs required may be more extensive once the repairs are underway.
